

## New Release: Version 1.2 of Analyze IQ Lab & Spectra Manager

**Version 1.2 of the Analyze IQ software suite**, the most sophisticated chemometric software in the industry, is now available. This new release **works with Windows 7**, both 32-bit and 64-bit, as well as with earlier versions of Microsoft Windows.

The Analyze IQ software suite provides **rapid and accurate** analysis of **complex mixtures**, using both well-established chemometric methods and innovative new techniques based on machine learning. The suite includes:

**FREE  
DOWNLOAD!**

Go to  
[www.AnalyzeIQ.com](http://www.AnalyzeIQ.com)  
to download a  
free upgrade  
or evaluation

- **Analyze IQ Lab**, the chemometric software package for examination of spectra, model-based analyses of materials, and development of new analytical models
- **Analyze IQ Spectra Manager**, the spectral database and data management package for best management of spectra libraries

### Now with additional file formats:

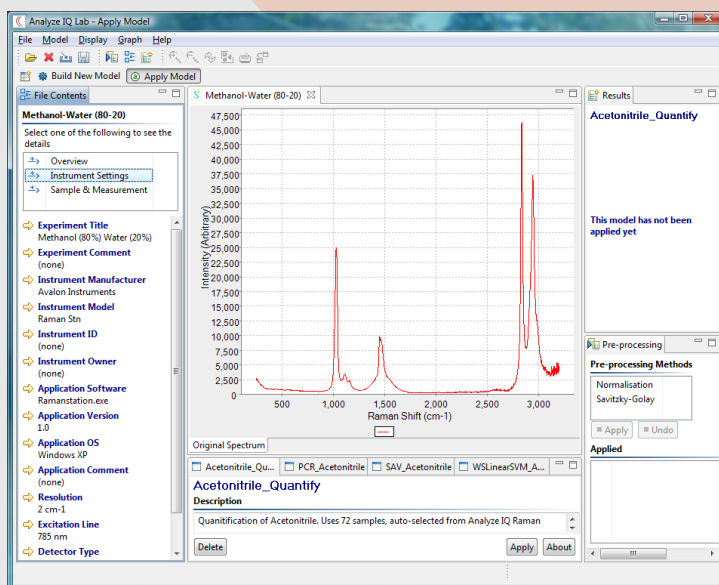

- IUPAC's JCAMP-DX
- NIST's SpectroML
- Simple XY text files
- Improved support for Thermo SPC
- AIQ: the new text-based XML format
- CSV files and data from Excel
- Better support for unevenly spaced data

### Other new features:

- Instrument Interface mechanism, to allow for direct acquisition of spectra
- Refinements to the intuitive and modern Analyze IQ user interface
- Better graphing and display of spectrum details
- More help and information messages, as well as updates to our comprehensive and detailed user manuals and documentation.

### And the Analyze IQ software suite still has many other unique features:

- A model-driven paradigm that separates model-building from model usage, so that you can **package and deploy** expert chemometric knowledge
- Designed for analysis and storage of **mixtures** data
- Combines accuracy with ease of use, with features such as the **model-building wizard**
- A wide range of model-building techniques, ranging from standard chemometric methods to innovative **patent-protected** techniques.
